The areas covered range from the intellectual, social and emotional development of the child to the ways in which adults perceive, attend, remember and communicate; from Freud's psychoanalytic framework to the work of present day psychologists; from debates about the scientific status of psychology to the special problems which the study of people poses for psychologists. Each chapter presents important issues in depth, highlighting controversies while showing that they rarely have neat solutions. The text incorporates the best of the Open University's tried and tested teaching methods, and particular importance is placed on encouraging the reader's active participation, making the books enjoyable and stimulating as well as informative. Incorporating the thinking, feeling, and behaving dimensions of human experience, the tenth edition of Corey's best-selling book helps students compare and contrast the therapeutic models expressed in counseling theories. Corey introduces students to the major theories (psychoanalytic, Adlerian, existential, person-centered, Gestalt, reality, behavior, cognitive-behavior, family systems, feminist, postmodern, and integrative approaches) and demonstrates how each theory can be applied to two cases (Stan and Gwen). With his trademark style, he shows students how to apply those theories in practice, and helps them learn to integrate the theories into an individualized counseling style.
