Environmental Science: A Global Concern is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. As practicing scientists and educators, the Cunningham author team brings decades of experience in the classroom, in the practice of science, and in civic engagement. This experience helps give students a clear sense of what environmental science is and why it matters in this exciting, new 13th edition. Environmental Science: A Global Concern provides readers with an up-to-date, introductory global view of essential themes in environmental science. The authors balance evidence of serious environmental challenges with ideas about what we can do to overcome them. An entire chapter focuses on ecological restoration; one of the most important aspects of ecology today. Case studies in most chapters show examples of real progress, and "What Can You Do?" lists give students ideas for contributing to solutions.

Environmental Science: A Global Concern, Tenth Edition, is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one- or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. The goal of this book is to provide an up-to-date, introductory global view of essential themes in environmental science along with emphasis on details and case studies that will help students process and retain the general principles. Because most students who will use this book are freshman or sophomore non-

science majors, the authors make the text readable and accessible without technical jargon or a presumption of prior science background.

Annual Editions is a series of over 65 volumes, each designed to provide convenient, inexpensive access to a wide range of current articles from some of the most respected magazines, newspapers, and journals published today. Annual Editions are updated on a regular basis through a continuous monitoring of over 300 periodical sources. The articles selected are authored by prominent scholars, researchers, and commentators writing for a general audience. The Annual Editions volumes have a number of common organizational features designed to make them particularly useful in the classroom: a general introduction; an annotated table of contents; a topic guide; an annotated listing of selected World Wide Web sites; and a brief overview for each section. Each volume also offers an online Instructor's Resource Guide with testing materials. Using Annual Editions in the Classroom is the general instructor's guide for our popular Annual Editions series and is available in print (0073301906) or online. Visit www.mhcls.com for more details.

Rather than the 25 to 30 chapters found in most environmental science textbooks, the authors have limited *Principles of Environmental Science: Inquiry and Applications* to 16 chapters--perfect for the one-semester, non-majors environmental science course. True to its title, the goal of this concise text is to provide an up-to-date, introductory view of essential themes in environmental science along with offering students numerous opportunities to practice scientific thinking and active learning.

Environmental Science: A Global Concern, Twelfth Edition, is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. Cunningham and Cunningham have updated much of the data in the 12th edition; updated data on hunger and obesity, waste production, CO₂ emissions, and the effects of the 2010 oil spill are just a few examples. *Environmental Science: A Global Concern, Twelfth Edition*, provides readers with an up-to-date, introductory global view of essential themes in environmental science. There is probably no set of issues of greater importance in the contemporary world than those that are to do with the Earth on which we live and depend. The more alienated we become from it the more we contribute to our own destruction. Christianity's complicity in this destruction is well-documented and hotly debated. Africa can ill afford to fall into the same trap that Western Christianity has in this regard. One senses the urgency of these concerns in Blasus's African Theocology: Studies in African Religious Creation Care. Extremely well-informed in the field, Blasus not only draws on the three major religions in Africa--Christianity, Islam, and African traditional religion--but demonstrates familiarity with the most important recent contributions in the field from Western scholarship. With its emphasis on pedagogics, African Theocology will play a seminal role in the construction of curricula for an African Christian theology of the environment and is sure to be an essential contribution to all libraries in institutions of higher learning.
