This book provides an introduction to Acoustic Emission Testing and its applications to different materials like concrete, steel, ceramics, geotechnical materials, polymers, biological structures and wood. Acoustic Emission Techniques (AET) techniques have been studied in engineering for a long time. The techniques are applied more and more to practical investigations and are more and more standardized in

codes. This is because the degradation of structures due to ageing urgently demand for maintenance and rehabilitation of structures in service. It results in the need for the development of advanced and efficient inspection techniques. In mechanical engineering and concerning the monitoring of machines and mechanical components, AE is a widely accepted observing deterioration in the frame of structural health monitoring. The advantages of AE like sensitivity, damage localization potential, non-intrusive nature as well as developments in signal analysis and data transmission allow applications that could not be considered decades ago. As such, AE techniques draw great attention to diagnostic applications and in material testing. This book covers all levels from the description of AE basics for AE beginners (level of a student) to sophisticated AE algorithms and applications to real large-scale structures as well as the observation of the cracking process in laboratory specimen to study fracture processes. This book has proved its worth over the past twelve years. Now in its second edition, it will be a resource that sets the standard and equips readers for the future. All chapters from the 1st edition have been updated and rewritten and eight extra chapters (e.g also regarding AE tomography, AE in plate-like structures and AE for investigations of hardening of fresh concrete) have been added.

This book presents select proceedings of the International Conference on Engineering Materials, Metallurgy and Manufacturing (ICEMMM 2018), and covers topics regarding both the characterization of materials and their applications across engineering domains. It addresses standard materials such as metals, polymers and composites, as well as nano-, bio- and smart materials. In closing, the book explores energy, the environment and green processes as related to materials engineering. Given its content, it will prove valuable to a broad readership of students, researchers, and professionals alike.

Behaviour of Steel Structures in Seismic Areas comprises the latest progress in both theoretical and experimental research on the behaviour of steel structures in seismic areas. The book presents the most recent trends in the field of steel structures in seismic areas, with particular reference to the utilisation of multi-level performance bas

In the year 2030 AD, a black hole comes hurtling towards the Earth. Rajaraja Cholan, a former ruler of an ancient, powerful empire in India, learned of a prophecy that foretold the apocalypse. The prophecy declared that a black hole would come hurtling toward Earth at nearly the speed of light and that there was no hope for mankind to

survive the event. Springing into action, the king declared that his son Rajendra Cholan would take the throne of the Chola Dynasty. He then enlisted the help of hundreds of the kingdom's most trusted people and undertook a 1000-year exile. During their exile, the king and his trusted subjects worked on building a spaceship beneath the Indian Ocean that could be the answer to the dynasty's survival of the fast-approaching black hole. With one millennium to prepare, the king and his men felt they must have a fighting chance at succeeding in their mission. Its the year 2030. The American president and other world leaders are meeting in the White House to rally their forces and the greatest minds in modern science searching for answers. Rajaraja, along with his most trusted advisor and guru Agasthiyar, makes their appearance in the war room to inform the contemporary world leaders of the provisions that have been created. As humanity prepares to flee Earth, a traitor attempts to kill Rajaraja. Unable to trust his friends, and with humanity's existence hanging in the balance, Rajaraja must stop the traitor before they can kill him and doom humanity to the black hole. Excellent blend of Tamil history and culture, Sci-fi, and end-of-the-world scenarios.
