Ever wonder what lies beyond the doors, fences and ladders you pass every day? A hidden world of mystery, beauty and free fun awaits the curious who choose to seek adventure off the beaten path - without even leaving their own city. Access All Areas takes you behind the scenes to little-known urban spaces like utility tunnels, rooftops, abandoned buildings, construction sites and storm drains, unveiling the possibilities - and perils - of the world of urban exploration.

In recent decades, remote sensing technology has been incorporated in numerous mineral exploration projects in metallogenic provinces around the world. Multispectral and hyperspectral sensors play a significant role in affording unique data for mineral exploration and environmental hazard monitoring. This book covers the advances of remote sensing data processing algorithms in mineral exploration, and the technology can be used in monitoring and decision-making in relation to environmental mining hazard. This book presents state-of-the-art approaches on recent remote sensing and GIS-based mineral prospectivity modeling, offering excellent information to professional earth scientists, researchers, mineral exploration communities and mining companies.
