When she was nine, Megan Meade met a group of terrible, mean, Popsicle-goo-covered boys, the sons of her father's friend -- the McGowan boys. Now, seven years later, Megan's army doctor parents are shipping off to Korea and Megan is being sent to live with the little monsters, who are older now and quite different than she remembered them. Living in a house with seven boys will give Megan, who has never even been kissed, the perfect opportunity to learn everything there is to know about boys. And she'll send all her notes to her best friend, Tracy, in... Megan Meade's Guide to the McGowan Boys Observation #1: Being an army brat sucks. Except that this is definitely a better alternative to moving to Korea. Observation #2: Forget evil, laughing, little monsters. These guys have been touched by the Abercrombie gods. They are a blur of toned, suntanned perfection. Observation #3: I need a lock on my door. STAT. Observation #4: Three words: six-pack abs. Observation #5: Do not even get me started on the state of the bathroom. I'm thinking of calling in a hazmat team. Seriously. Observation #6: These boys know how to make enemies. Big time. Megan Meade will have to juggle a new school, a new family, a new crush -- on the boy next door, as in next bedroom door -- and a new life. Will she survive the McGowan boys?

HVAC Simplified (zip file)This text provides an understanding of fundamental HVAC concepts and how to extend these principles to the explanation of simple design tools used to create building systems that are efficient and provide comfortable and healthy environments. The text contains twelve chapters that review the fundamentals of refrigeration, heat transfer, and psychrometrics. Information from the ASHRAE Handbook"Fundamentals is summarized and supplemented with items from industry sources. The remaining chapters assemble information from ASHRAE Handbooks, ASHRAE standards and manufacturer data present design procedures commonly used by professional engineers. Other topics include equipment selection and specification, comfort and IAQ, building assemblies, heating and cooling loads, air distribution system design, water distribution system design, electrical and control systems, design for energy efficiency, and design for economic value. A suite of complementary spreadsheet programs that incorporate design and computation procedures from the text are provided on the CD that accompanies this book. These programs include psychrometric analysis, equipment selection, heating and cooling load calculation, an electronic "ductulator," piping system design, a ductwork cost calculator, and programs to evaluate building system demand and energy efficiency. Future updates to these programs can be found at www.ashrae.org/updates. The downloadable version of this product comes as a zip file and includes a PDF of the User's Manual and all the supporting files located on the CD that accompanies the print version. You must have WinZip to open the download.

In his cultural analysis of the motor car in Germany, Wolfgang Sachs starts from the assumption that the automobile is more than a means of transportation and that its history cannot be understood merely as a triumphant march of technological innovation. Instead, Sachs examines the history of the automobile from the late 1880s until today for evidence on the nature of dreams and desires embedded in modern culture. Written in a lively style and illustrated by a wealth of cartoons, advertisements, newspaper stories, and propaganda, this book explores the nature of Germany's love affair with the automobile. A "history of our desires" for speed, wealth, violence, glamour, progress, and power-as refracted through images of the automobile-it is at once fascinating and provocative. Sachs recounts the development of the automobile industry and the impact on German society of the marketing and promotion of the motor car. As cars became more affordable and more common after World War II, advertisers fanned the competition for status, refining their techniques as ownership became ever more widespread. Sachs concludes by demonstrating that the triumphal procession of private motorization has in fact become an intrusion. The grand dreams once attached to the automobile have aged. Sachs appeals for the cultivation of new dreams born of the futility of the old ones, dreams of "a society liberated from progress," in which location, distance, and speed are reconceived in more appropriately humane dimensions.

This revision of ASHRAE'S Fundamentals of Psychrometrics self-directed learning course book addresses the use of psychrometrics and the psychrometric chart for typical applications and systems. It is intended for HVAC designers of various backgrounds and to be an introduction for those new to psychrometrics. This second edition of the course was rewritten in an attempt to teach the fundamentals of psychrometrics in about half the time as the previous version. The author has used his 41 years of experience in the HVAC industry as the expertise for the format and content. Skill Development Exercises at the end of each chapter help readers assess their understanding of the material and apply what they learn to real-world situations. Answers to these exercises can be submitted online to earn PDH, CEU, or LU credits.

Why do all cultures, distant and diverse, have similar tales of dragons? Universal wisdom confirms dragons have interacted with people since time immemorial—they call to us, pique our curiosity, and arouse our fears. These mystical beasts are real and their power, their influence, and especially their magick can be captured. Building upon rituals and drawing on their energy, learn to befriend these inspirational creatures and become partners with them on a spiritual journey. Move with them, learn from them, dance in perfect human/dragon syncopation. Praise: "A unique, one-of-a-kind tome and a welcome addition to the growing body of metaphysical lore."—Midwest Book Review "A personal devotion and an academic work of the highest order."—The Dragon Chronicle (UK) "Dragon-Lovers everywhere will like this book."—Prediction
