Teaching Lab Science Courses Online is a practical resource for educators

developing and teaching fully online lab science courses. First, it provides guidance for using learning management systems and other web 2.0 technologies such as video presentations, discussion boards, Google apps, Skype, video/web conferencing, and social media networking. Moreover, it offers advice for giving students the hands-on “ wet laboratory ” experience they need to learn science effectively, including the implications of implementing various lab experiences such as computer simulations, kitchen labs, and commercially assembled at-home lab kits. Finally, the book reveals how to get administrative and faculty buy-in for teaching science online and shows how to negotiate internal politics and assess the budget implications of

It has quickly become apparent in the past year that online learning is not only an asset, but it is critical to the continued education of youth during times of crisis. However, districts and schools across the nation are in need of guidance and practical, research-backed approaches to distance and hybrid learning. The current COVID-19 crisis has demonstrated that effective learning in K-12 is possible, but many districts struggled and continue to struggle in achieving that reality. There is also the growing consensus that even if things “ return to normal, ” distance and blended learning strategies should continue to be employed in many ways across the K-12 environment. Designing Effective Distance and Blended

Learning Environments in K-12 provides key insights into the ways that school districts and educators from across the world have effectively designed and implemented distance and blended learning approaches to enable and enhance student learning. The diverse collection of authors from various demographics and roles in school systems will benefit readers across a wide spectrum of school community stakeholders. There will also be an emphasis on how research and theory is put into practice, along with an honest discussion of what strategies and actions were successful as well as those that were less so. This book is essential for professionals and researchers working in the field of K-12 education, particularly superintendents, curriculum developers, professional learning

designers, school principals, instructional technology specialists, and teachers, as well as administrators, researchers, academicians, and students interested in the effective practices being used in blended learning approaches.

With the increasing focus on science education, growing attention is being paid to how science is taught. Educators in science and science-related disciplines are recognizing that distance delivery opens up new opportunities for delivering information, providing interactivity, collaborative opportunities and feedback, as well as for increasing access for students. This book presents the guidance of expert science educators from the US and

from around the globe. They describe key concepts, delivery modes and emerging technologies, and offer models of practice. The book places particular emphasis on experimentation, lab and field work as they are fundamentally part of the education in most scientific disciplines. Chapters include: *

- * Discipline methodology and teaching strategies in the specific areas of physics, biology, chemistry and earth sciences.
- * An overview of the important and appropriate learning technologies (ICTs) for each major science.
- * Best practices for establishing and maintaining a successful course online.
- * Insights and tips for handling practical components like laboratories and field work.
- * Coverage of breaking topics, including MOOCs, learning

analytics, open educational resources and m-learning. * Strategies for engaging your students online. A companion website presents videos of the contributors sharing additional guidance, virtual labs simulations and various additional resources.

The last decade has seen a dramatic increase in the application of active learning methods including problem-based learning, cooperative learning, and service learning and supportive strategies such as electronic methods to the college/university chemistry classroom and laboratory. This symposium series book focuses on the application of active learning methods in teaching analytical science, broadly defined, at both the undergraduate and graduate levels. The volume includes a wide range of

examples of how these methods are being applied at public and private community colleges, four-year colleges, and graduate research universities in the United States and abroad. As such the strategies and materials described in the book should be of interest to analytical chemists, chemical educators, and chemistry teaching faculty and graduate students no matter their area of specialization.
