An in-depth review by leading authorities of the latest therapies and techniques for rescuing persons in cardiac arrest. The authors explore

Online Library Latest Cpr Guidelines

the physiology behind current state-of-the-art clinical resuscitation and translate it into practical bedside recommendations, clinical tips, and expert techniques. Topics of interest include the epidemiology of sudden death, management of ventilation, chest compression technique training, public access defibrillation, drug delivery during CPR, the latest drug therapies, and cardiac arrest in disease, pregnancy, drowning, lightning strike, and trauma. The authors also review the major ongoing research in resuscitation science that will likely affect the next set of international resuscitation guidelines.

Cardiopulmonary-cerebral resuscitation is a comprehensive term applied to elaborate the fundamental

Online Library Latest Cpr Guidelines

principles of cardiopulmonary resuscitation (CPR) and advanced life support and. CPR is both in humans and small animals. Measuring the quality of performance of CPR during resuscitation is a high priority. Over the past four decades, such interventions have saved many lives, but still the quality remains quite low. This book which is arranged in twelve chapters discusses the methods and the quality of CPR, while elaborative figures are presented to help understanding the issues. Indeed the latest changes and methods presented by American CPR association are also presented.

Following the latest CPR guidelines, this program teaches basic life support and addresses breathing and cardiac emergencies in caring for

Online Library Latest Cpr Guidelines

adults, children and infants. .

Background: It has been proved that bystander cardiopulmonary resuscitation (CPR) saves lives; however, which training method in CPR is most instructive and whether survival is affected by the training level of the bystander have not yet been fully described. Aim: To identify the factors that may affect 7th grade students ' acquisition of CPR skills during CPR training and their willingness to act, and to describe 30-day survival from outof- hospital cardiac arrest (OHCA) after bystander CPR and the actions performed by laymen versus off-duty medically educated personnel. Methods: Studies I–III investigate a CPR training intervention given to students in 7th grade during

Online Library Latest Cpr Guidelines

2013–2014. The classes were randomized to the main intervention: the mobile phone application (app) or DVD-based training. Some of the classes were randomized to one or several additional interventions: a practical test with feedback, reflection, a web course, a visit from elite athletes and automated external defibrillator (AED) training. The students' practical skills, willingness to act and knowledge of stroke symptoms, symptoms of acute myocardial infarction (AMI) and lifestyle factors were assessed directly after training and at 6 months using the Laerdal PC SkillReporting system (and entered into a modified version of the Cardiff test scoring sheet) and a questionnaire. The Cardiff test resulted in a total score of 12–48 points, and the questionnaire

Online Library Latest Cpr Guidelines

resulted in a total score of 0–7 points for stroke symptoms, 0–9 points for symptoms of AMI and 0– 6 points on lifestyle factors. Study IV is based on retrospective data from the national quality register, the Swedish registry of cardiopulmonary resuscitation, 2010-2014. Results: A total of 1339 students were included in the CPR training intervention. The DVD-based group was superior to the app-based group in CPR skills, with a total score of 35 (SD 4.0) vs 33 (SD 4.2) points directly after training (p
