# Read Book Using Ibm Websphere Application

WebSphere Application Server is a software product that performs the role of a web application server. More specifically, it is a software framework and middleware that hosts Java-based web applications. It is the flagship product within IBM's WebSphere software suite. It was initially created by Donald F. Ferguson, who later became CTO of Software for Dell. The first version was launched in 1998. This project was an offshoot from IBM HTTP Server team starting with Domino Go.

Server And Ibm Cofax  
based distributed e-business applications. Although this has proven to be successful in a number of areas, many organizations still struggle with several performance bottlenecks. Using IBM WebSphere and Versant enJin provides a framework for a solution that addresses some of these challenges - especially the complex object-oriented models of Enterprise Applications. Versant enJin integrates seamlessly with IBM WebSphere and provides the performance and scalability you need to accelerate your e-business transactions. The integration of Versant enJin with IBM WebSphere can

# Read Book Using Ibm Websphere Application

Server And Ibm Confex  
result in upto 50 times  
improvement in the  
performance of your e-  
business application - this  
is done by elimination of  
mapping objects to and from  
the relational world. In  
addition, enJin also enables  
you to get your products to  
the market faster by  
eradicating the need to know  
or develop in any language  
other than Java - no SQL, no  
JDBC or relational database  
programming. Versant enJin  
is a flexible infrastructure  
platform that persists Java  
objects and EJBs within the  
middle-tier without  
overloading your existing  
database systems. enJin  
gives you J2EE capabilities,
