"Nilson's contributions to higher

education are substantial, and this book is another gift to all of us who care about good teaching and helping students become autonomous, deep learners."--John Zubizarreta, Professor of English, and Director of Honors & Faculty Development, Columbia College "...a veritable gold mine of effective learning strategies that are easy for faculty to teach and for students to learn. Most students can turn poor course performance into success if they are taught even a few of the strategies presented. However, relatively few students will implement new strategies if they are not required to do so by instructors. Nilson shows how to seamlessly introduce learning strategies into classes, thereby maximizing the possibility that students will become self-regulated learners who take responsibility for

their own learning."--Saundra McGuire, Assistant Vice Chancellor (Ret.) & Professor of Chemistry, Louisiana State University Most of our students neither know how learning works nor what they have to do to ensure it, to the detriment both of their studies and their development as lifelong learners. The point of departure for this book is the literature on self-regulated learning that tells us that deep, lasting, independent learning requires learners to bring into play a range of cognitive skills, affective attitudes, and even physical activities - about which most students are wholly unaware; and that self-regulation, which has little to do with measured intelligence, can be developed by just about anyone and is a fundamental prerequisite of academic success. Linda Nilson

provides the theoretical background to student self-regulation, the evidence that it enhances achievement, and the strategies to help students develop it. She presents an array of tested activities and assignments through which students can progressively reflect on, monitor and improve their learning skills; describes how they can be integrated with different course components and on various schedules; and elucidates how to intentionally and seamlessly incorporate them into course design to effectively meet disciplinary and student development objectives. Recognizing that most faculty are unfamiliar with these strategies, she also recommends how to prepare for introducing them into the classroom and adding more as instructors become more confident using them.
