Discusses the many visits made by explorers, missionaries, businessmen, scientists, and others to Easter Island since the late 1600s and what they revealed about life on this remote Pacific island.

We set to work to excavate some of the statues which stood on the slope of the Raraku mountain. The natives were entirely indifferent whether they worked or not, but by paying high wages and giving any quantity of mutton, we were able at this time to get a certain amount of precarious labour for digging and camp work. The whole lot, including my maid-servant, went in for every week-end to the village, and it was always a matter of anxiety to know whether they would ever return. -from Chapter XII
Western anthropology's first in-depth look at an isolated culture is also a daring adventure story of around-the-world travel. In February 1913, archaeologist Katherine Routledge set sail on a custom-built yacht-with a small crew and the support of British Association for the Advancement of Science, the British Museum, and the Royal Geographical Society-for Easter Island, where she embarked up the first effort to catalogue the island's mysterious statues, interview the natives, and document their culture, folklore, and traditions. Her scholarship is impeccable-this 1919 work is still considered foundational-but her lively writing and her practical perspective make this a delightful read that thrill armchair travelers and amateur ethnographers alike.
British archaeologist KATHERINE ROUTLEDGE (1866-1935) studied at Oxford University. She also wrote With Prehistoric People (1910), about her experiences in Africa after the Boer War.

Easter Island, a Chilean territory, is a remote volcanic island in Polynesia. Its native name is Rapa Nui. It's famed for archaeological sites, including nearly 900 monumental statues called Moai, created by inhabitants during the 13th-16th centuries. Let's learn about these mysterious giant stone heads known as Moai of Easter Island.

Relates Easter Islands tumultuous story, from its discovery by Polynesians in c. AD 700, through its rise and collapse in the 1500s, to the native populations struggle for civil rights in the 1960s and the growth of tourism in modern times.

Since Easter Island (Rapa Nui) was first discovered nearly 300 years ago, its people, culture and monolithic statues have been seen as an unsolvable riddle. At the heart of the so-called mystery stand the gigantic moai. How were they moved? What do they mean? Over more than 12 years, nearly 1000 statues have been measured, drawn, and photographed by Jo Anne Van Tilburg and a team of colleagues. In this book the author draws on the insights that have been gained, to examine Rapa Nui prehistory in the context of new understandings of ecology and culture.

Discusses the mysteries of Easter Island including how the statues were made and moved, and where the Easter Islanders themselves came from?
